

Exception Handling In Dart

Exception handling in Dart : is how you deal with runtime errors so your app doesn't crash and can respond gracefully.

◇ What is an Exception?

An **exception** is an error that happens **while the program is running**, such as:

- Dividing by zero
- Accessing an invalid index
- API failure
- File not found

◇ Why Exception Handling?

- Prevent app crashes
- Show meaningful error messages
- Keep the program running safely

Exception Handling Keywords in Dart

Dart uses:

- try
- catch
- on
- finally
- Throw

Examples :

- Try – Catch

```
1 void main() {  
2     try {  
3         int result = 10 ~/ 0; // integer division  
4         print(result);  
5     } catch (e) {  
6         print("Error occurred: $e"); // print the error message  
7     }  
8 }  
9
```
